

# **EFPIA Patients W.A.I.T. Indicator 2021 Survey**

Published April 2022

Max Newton, Engagement Manager, Global Supplier & Association Relations Kirstie Scott, Consultant, Global Supplier & Association Relations Per Troein, VP, Strategic Partners

# This year's Patients W.A.I.T. indicator has expanded to 39 countries and now includes the full EU27 countries

New indicators have been added on rate of restrictions and time to local authorisation dates

Improving the availability of medicines authorised in the European Union (EU) is a key priority for the European medicines regulatory network and for the pharmaceutical industry. This year's iteration of the Patients W.A.I.T. (Waiting to Access Innovative Therapies) Indicator has been running in evolving formats since 2004 and is the largest European study into innovative medicines availability and the time to patient access.

The charts in the following report covers an broader set of countries than in previous years. In the publication, data on 39 countries (27 EU, and 12 non-EU) are included giving a full European picture of availability.

Information on the 160 innovative medicines with central-marketing authorisation between 2017 and 2020 are included within the coming pages, with a one year delay to permit countries to include these medicines on their public reimbursement list, meaning that the data on availability is accurate as of *January 1st 2022*. This period is therefore inclusive of the COVID-19 pandemic, although no significant impact is noted in the indicator the impact on uptake has been shown through other studies.

Local pharmaceutical industry associations provide the information directly to IQVIA and EFPIA, and their methods are now included within the appendix to ensure full transparency to the study.

#### + Appendix & detailed methodology

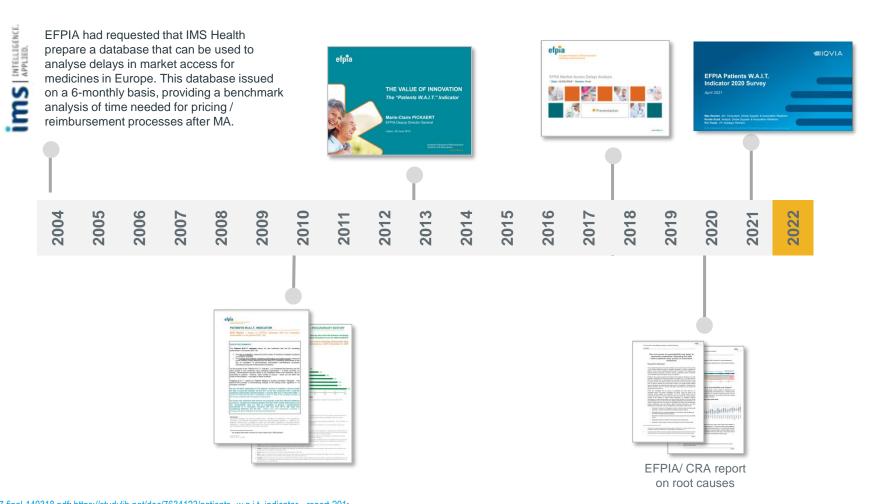

# Patients W.A.I.T. survey has evolved, and is entering its 18th year

The indicator long-running, and one of the largest datasets on medicines availability in Europe

Patients W.A.I.T. stands for:

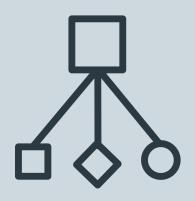

Waiting to Access Innovative Therapies

### The study is based on the core concept of "availability"

Definition of availability

In this study the term 'availability' is used throughout to permit standarised measurement across 39 healthcare systems

# Inclusion of a centrallyapproved medicine on the public reimbursement list in a country

Where appropriate it takes into consideration things like managed entry agreements, line-of-therapy or formulary restrictions. However, it does not have a correlation to the use / uptake of the medicines.

Country-specific nuances should be discussed with the local associations or EFPIA directly to ensure correct interpretation of the data, please see the appendix for further details.

### **Study summary**

#### Full methodology and definitions by country are available in the appendix of the report

#### **Core metrics**

The Patients W.A.I.T. Indicator shows 2 main metrics for new medicines (i.e. medicines including a substance not previously available in Europe) within a 4 year rolling cohort:

- 1.) Rate of availability, measured by the number of medicines available to patients in European countries. For most countries this is the point at which the product gains access to the reimbursement list (this does not necessarily indicate uptake / usage).
- 2.) The time to availability\*, measuring the average time between marketing authorisation and availability, using days from the date of marketing authorisation to the day of completion of post-marketing authorisation administrative processes (whether it is attributable to companies or competent authorities).

#### **Availability definition**

Description	Status		
Full reimbursement through a national reimbursement system	- Available		
Full automatic reimbursement by a hospital budget (e.g. Nordic system)	Available		
Limited reimbursement to specific subpopulations of approved indication	Available (marked LA*)		
Limited reimbursement on a national named patient basis (individual patient)			
Limited reimbursement while decision is pending (where system permits)			
Availability through a special program (e.g. managed entry agreements)			
Available only within the private market at the patients expense	Only privately available		
Not reimbursed, or not reimbursed while awaiting decision	Not available		

#### **Notes and caveats**

**Source of information:** EFPIA member associations, who either refer to information available from official sources, gather the information directly from member companies or in some cases use IQVIA sales data.

**Local marketing exceptions:** Countries where local marketing authorisation dates are used to calculate the time to availability are: Bosnia and Herzegovina, Kazakhstan, Macedonia, Russia, Serbia, Switzerland and Turkey.

**Completeness**: Some country associations did not submit full datasets. Countries with substantially limited datasets are: Albania (<5% complete), Bosnia (59% complete), Croatia (34% complete), Cyprus (44% complete), Macedonia (79% complete), and Malta. This is noted on slides with an asterisk (\*).

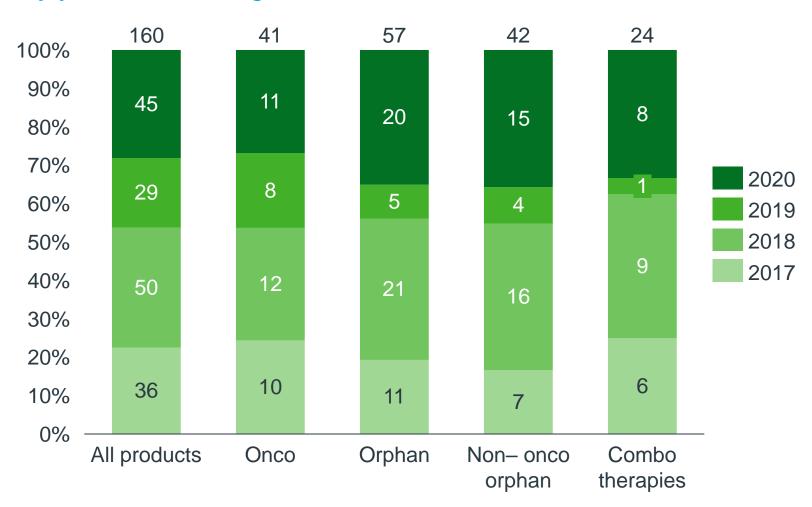

Average calculations: The EU averages noted throughout are averages for the 27 countries in the European Union. This is the first year that Cyprus, Malta, and Luxembourg have participated in the study meaning the averages use a different cohort of countries than 2020

<sup>\*</sup> The Patients W.A.I.T. Indicator is not a measurement of the delays as defined in the "Transparency" Directive (directive 89/105/EEC). Delays under the "Transparency" Directive reflect the number of days that national competent authorities need to make their decisions regarding price and inclusion of medicines in the positive list, where applicable. These delays do not include the time needed to prepare submissions under relevant national regulations, which may also include clock-stops for supply of additional information during the process; neither do "Transparency" Directive delays include time required to complete other formalities before a new medicine can be made available in a given country.

### Study composition

#### By year of marketing authorisation

#### **Definitions:**

- Products with central marketing authorisation, sourced from EMA EPARs (last accessed November 2021)
- Orphan status from EMA on orphan medical products (OMP) status
- Oncology products flagged using IQVIA MIDAS Oncology market definition: L1 & L2 & V3C & Revlimid & Xgeva & Proleukin & Pomalyst
- Combination products include any product with more than one molecule, including branded / generic combinations in fixed doses.

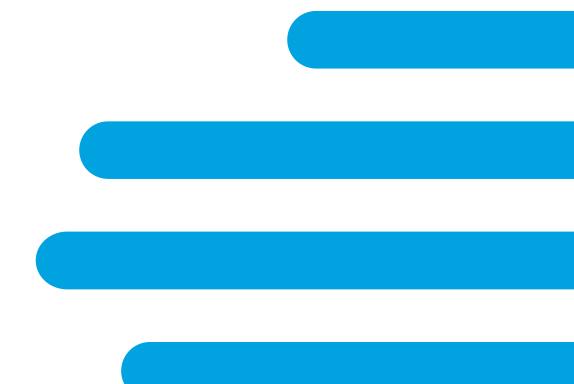

# 1. Overview (all products)

#### Indicators:

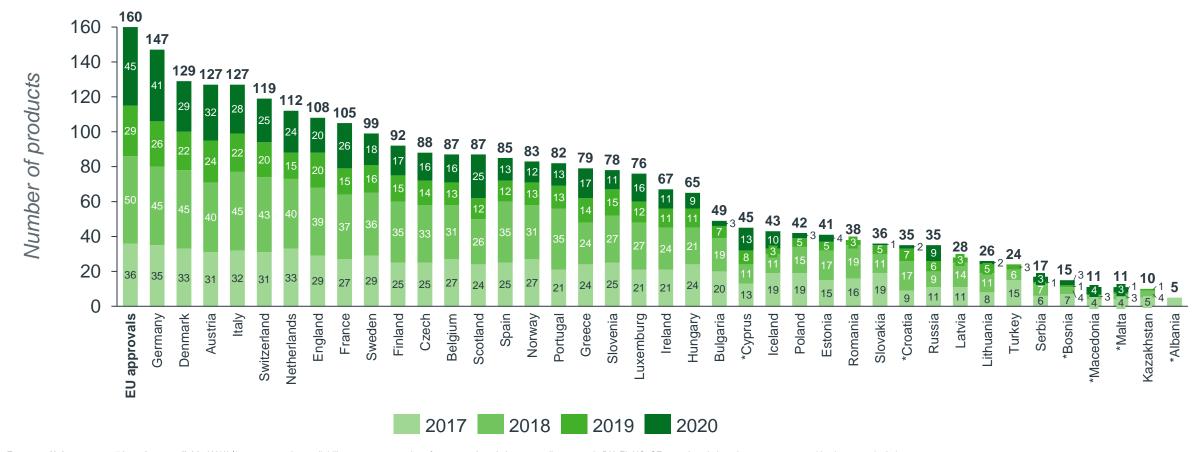

- 1.1. Total availability by approval year
- 1.2. Rate of availability
- 1.3. Rate of full availability\*
- 1.4. Breakdown of availability
- 1.5. Time to availability
- 1.6. Time from central approval to availability\*

<sup>\*</sup> Denotes new indicators published in 2022

### Total availability by approval year (2017-2020)

The total availability by approval year is the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>), split by the year the product received marketing authorisation in Europe.

# Rate of availability (2017-2020)

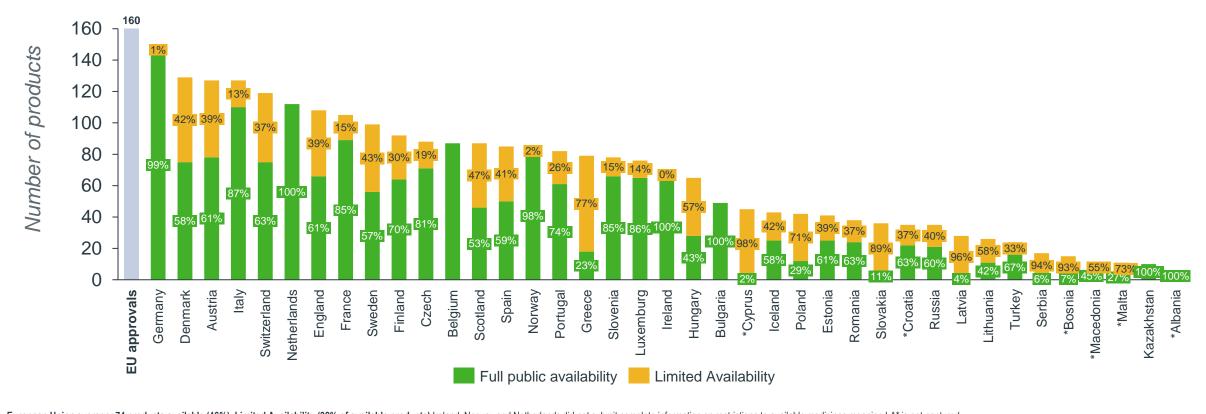

The rate of availability, measured by the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022. For most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>, including products with limited availability.

# Rate of full availability (%, 2017-2020)

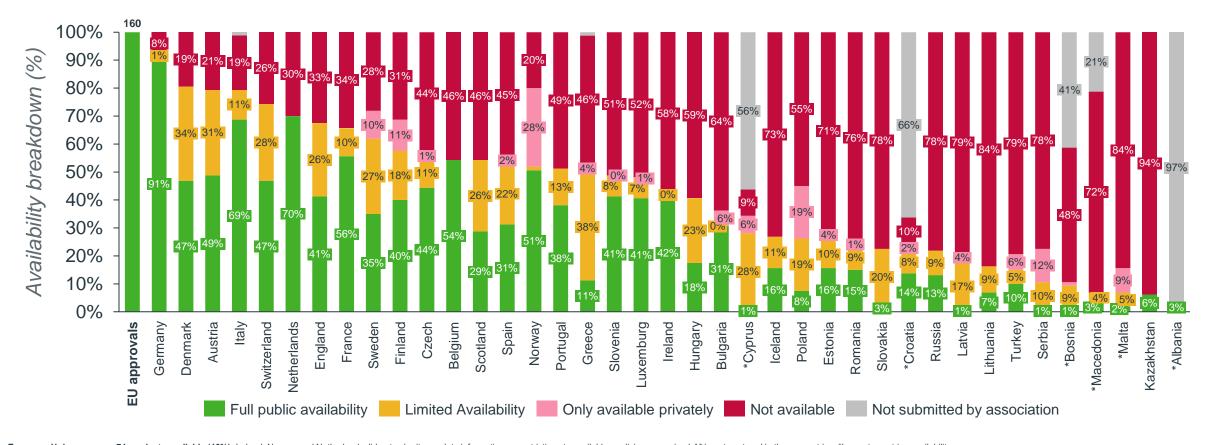

The rate of full availability is a new indicator which shows the proportion of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list†) without any restrictions to the patient population, or through named patient basis schemes which have increased significantly in recent years and were not always captured in survey submissions.

# Breakdown of availability (%, 2017-2020)

The **breakdown of availability** is the composition of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>). This includes all medicines status to provide a complete picture of the availability of the cohort studied.

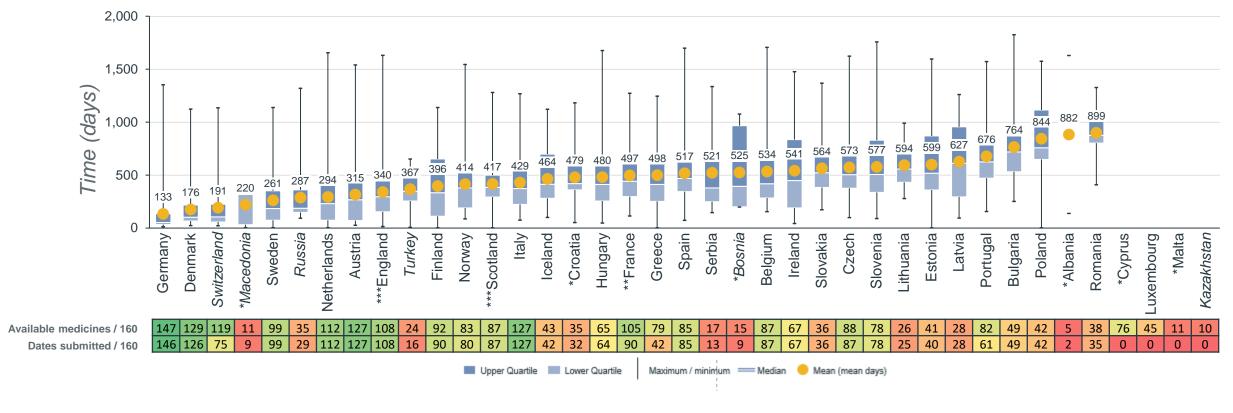

### Time to availability (2017-2020)

The **time to availability** is the days between marketing authorisation and the date of availability to patients in European countries (for most this is the point at which products gain access to the reimbursement list<sup>†</sup>). The marketing authorisation date is the date of central EU authorisation in most countries, except for countries shown in italics where local authorisation dates have been used. Data is correct to 1<sup>st</sup> January 2022.

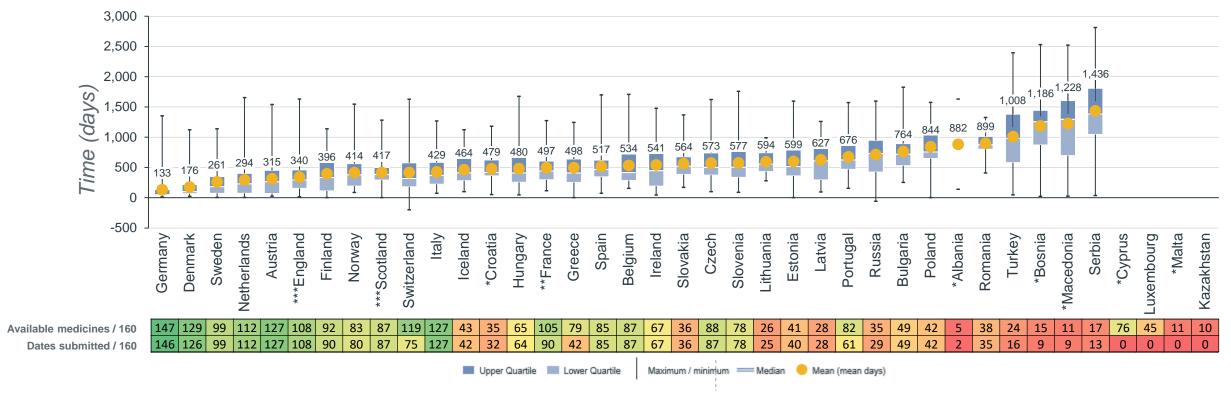

**European Union average: 511 days (mean %)** In most countries availability equates to granting of access to the reimbursement list, except in DK, FI, NO, SE some hospital products are not covered by the general reimbursement scheme. \*Countries with asterisks did not complete a full dataset and therefore availability may be unrepresentative \*\*For France, the time to availability (497 days, n=105 dates submitted) includes products under the ATU system (n=44 dates submitted) for which the price negotiation process is usually longer. If one considers that products under the ATU system are directly available (time to availability = 0), the average time to availability is 240 days. \*\*\*In the UK, MHRA's Early Access to Medicines Scheme provides access prior to marketing authorisation but is not included within this analysis, and would reduce the overall days for a small subset of medicines.

# Time from central approval to availability (2017-2020)

The time from central approval to availability is the days between marketing authorisation and the date of availability to patients in European countries (for most this is the point at which products gain access to the reimbursement list<sup>†</sup>). The marketing authorisation date is the date of central EU authorisation throughout.

European Union average: 511 days (mean %) †In most countries availability equates to granting of access to the reimbursement list, except in DK, FI, NO, SE some hospital products are not covered by the general reimbursement scheme. \*Countries with asterisks did not complete a full dataset and therefore availability may be unrepresentative \*\*For France, the time to availability (497 days, n=105 dates submitted) includes products under the ATU system (n=44 dates submitted) for which the price negotiation process is usually longer. If one considers that products under the ATU system are directly available (time to availability = 0), the average time to availability is 240 days. \*\*\*In the UK, MHRA's Early Access to Medicines Scheme provides access prior to marketing authorisation but is not included within this analysis, and would reduce the overall days for a small subset of medicines.

#### **Key observations**

#### Executive summary

Measure	EU average for all products	Oncology	Orphan	Non-oncologic orphan	Combination therapy
Rate of availability	<b>46%</b> (49% in 2020)	<b>55%</b> (58% in 2020)	37% (41% in 2020)	<b>32%</b> (34% in 2020)	53% (64% in 2020)
Average time to availability	<b>511 Days</b> (504 days in 2020)	545 Days (561 days in 2020)	636 Days (653 days in 2020)	587 Days (667 days in 2020)	407 Days (411 days in 2020)

#### **Summary:**

- Patient access to new medicines is highly varied across Europe, with a 90% variance between Northern and Western European countries and Southern and Eastern European countries.
- EU average availability has fallen by a non-significant (<5%) versus last year's analysis, as more countries with low availability are now able to be included within the W.A.I.T. indicator
- Restrictions to the availability of medicines can change the position of countries significantly, and are increasingly present
- The average delay between market authorisation and patient access can vary by a factor greater than x7 across Europe, from as little as 4 months to 29 months (over 2.5 years)
- Even within a country there is a large variation in the speed of patient access to different products. Often the level of variation within a country is greater than between countries
- Many countries with low data availability appear high in the indicator but it is important to take into account the small number of available medicines that the figure represents

#### **Metrics key:**

**Text colour** indicates relative position versus the current (2021) EU average (significantly higher than current EU average / significantly lower than current EU average)

Arrow colour indicates significant changes versus the previous (2020) EU average (significant improvement versus previous year 11 / significant deterioration versus prior year 11

#### Average calculations:

Only a difference of +/- 5% (~30 days) is considered a significant change and therefore highlighted

The EU averages noted throughout are averages for the 27 countries in the European Union for the first time.

# 2. Oncology medicines

#### **Indicators:**

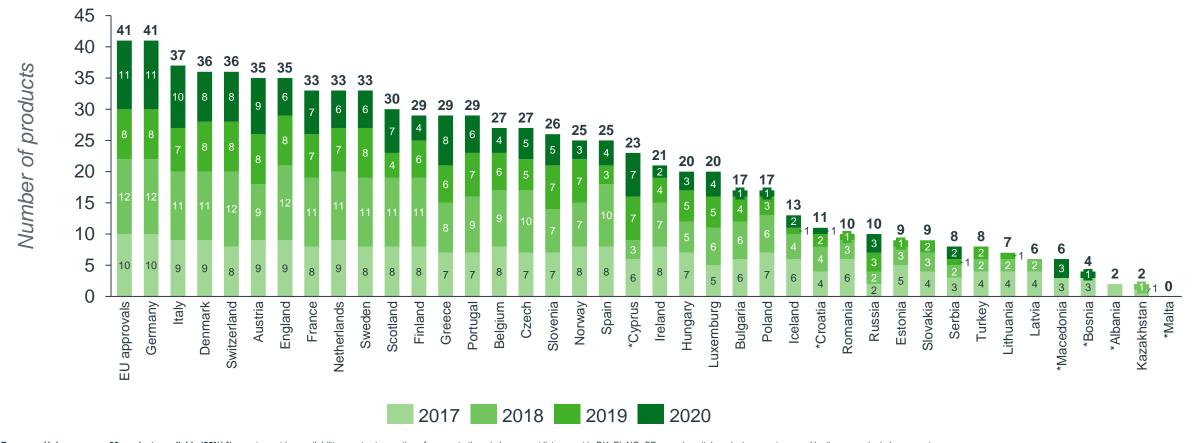

- 2.1. Total availability by approval year
- 2.2. Rate of availability
- 2.3. Rate of full availability\*
- 2.4. Breakdown of availability
- 2.5. Time to availability

<sup>\*</sup> Denotes new indicators published in 2022

### Oncology availability by approval year (2017-2020)

The total availability by approval year is the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>), split by the year the product received marketing authorisation in Europe.

# Oncology rate of availability (2017-2020)

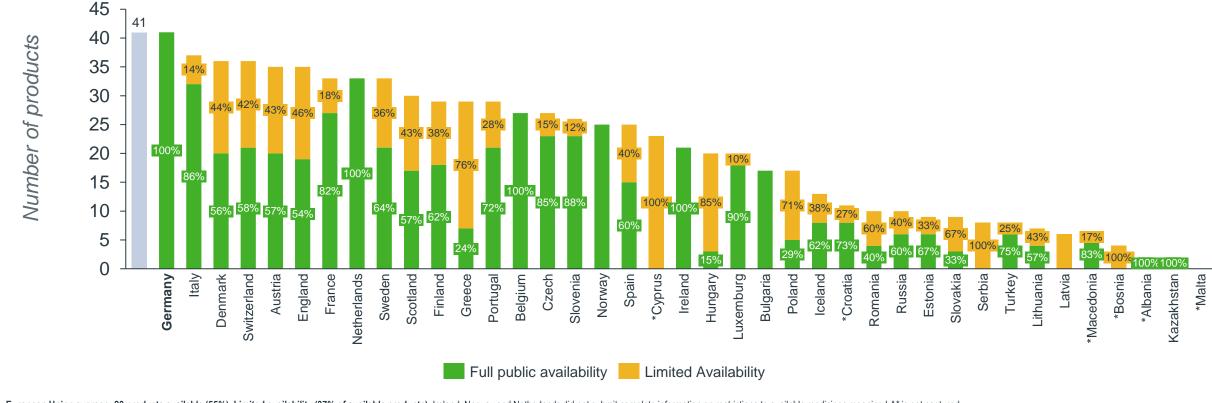

The rate of availability, measured by the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022. For most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>, including products with limited availability.

# Oncology rate of full availability (%, 2017-2020)

The rate of full availability is a new indicator which shows the proportion of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list†) without any restrictions to the patient population, or through named patient basis schemes which have increased significantly in recent years and were not always captured in survey submissions.

### Oncology breakdown of availability (%, 2017-2020)

The **breakdown of availability** is the composition of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>). This includes all medicines status to provide a complete picture of the availability of the cohort studied.

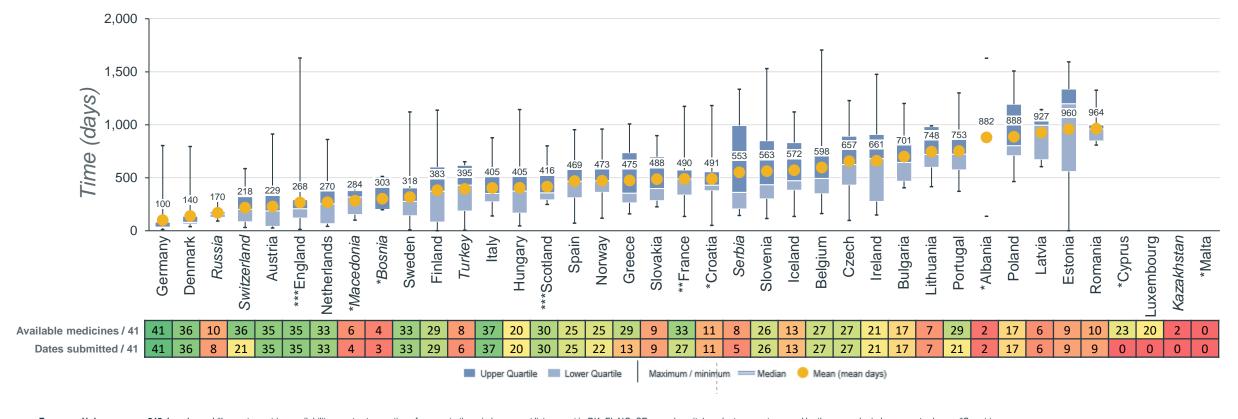

# Oncology time to availability (2017-2020)

The **time to availability** is the days between marketing authorisation and the date of availability to patients in European countries (for most this is the point at which products gain access to the reimbursement list<sup>†</sup>). The marketing authorisation date is the date of central EU authorisation in most countries, except for countries shown in italics where local authorisation dates have been used. Data is correct to 1<sup>st</sup> January 2022.

European Union average: 545 days (mean) †In most countries availability equates to granting of access to the reimbursement list, except in DK, FI, NO, SE some hospital products are not covered by the general reimbursement scheme. \*Countries with asterisks did not complete a full dataset and therefore availability may be unrepresentative. \*\*In France, some innovative products without competitors can be made available prior to market authorisation under the system of Temporary Authorisations. As these are not taken into account in the analysis, the average would be lower. \*\*\*In the UK, MHRA's Early Access to Medicines Scheme provides access prior to marketing authorisation but is not included within this analysis, and would reduce the overall days for a small subset of medicines.

#### **Key observations**

#### Executive summary

Measure	EU average for all products	Oncology	Orphan	Non-oncologic orphan	Combination therapy
Rate of availability	<b>46%</b> (49% in 2020)	<b>55%</b> (58% in 2020)	37% (41% in 2020)	<b>32%</b> (34% in 2020)	53% (64% in 2020)
Average time to availability	<b>511 Days</b> (504 days in 2020)	545 Days (561 days in 2020)	636 Days (653 days in 2020)	587 Days (667 days in 2020)	407 Days (411 days in 2020)

#### **Summary:**

- The EU average availability is 9% higher for oncology products than all products approved, however, the average time to availability for oncology products is 1 month slower which is an improvement from 2020.
- The average delay between market authorisation and patient access for Oncology products varies from 3 months to over 31 months (>2.5 years).
- Only Germany has availability to all of the most recent year's oncology medicines, versus 5 countries for 2019 (Austria, Denmark, Germany, Switzerland, England) whilst others have no availability to any
- In many markets the availability of oncology medicines approved in 2019 is more than 30% above the rate of availability of all approvals in 2019.
- Limited availability is highest in this section of the W.A.I.T indicator, although it is noted that restrictions are in different markets are not always equivalent between countries

#### **Metrics key:**

**Text colour** indicates relative position versus the current (2021) EU average (significantly higher than current EU average / significantly lower than current EU average)

Arrow colour indicates significant changes versus the previous (2020) EU average (significant improvement versus previous year 11 / significant deterioration versus prior year 11

#### Average calculations:

Only a difference of +/- 5% (~30 days) is considered a significant change and therefore highlighted

The EU averages noted throughout are averages for the 27 countries in the European Union for the first time.

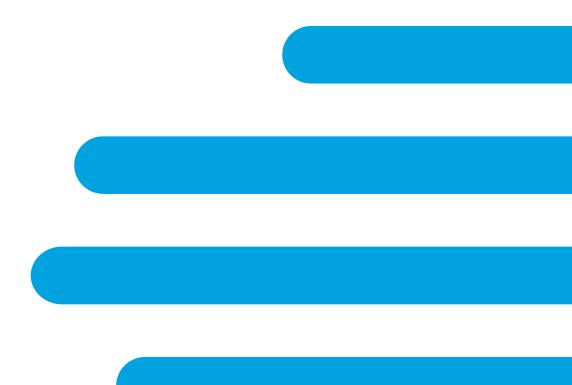

# 3. Orphans medicines

#### Indicators:

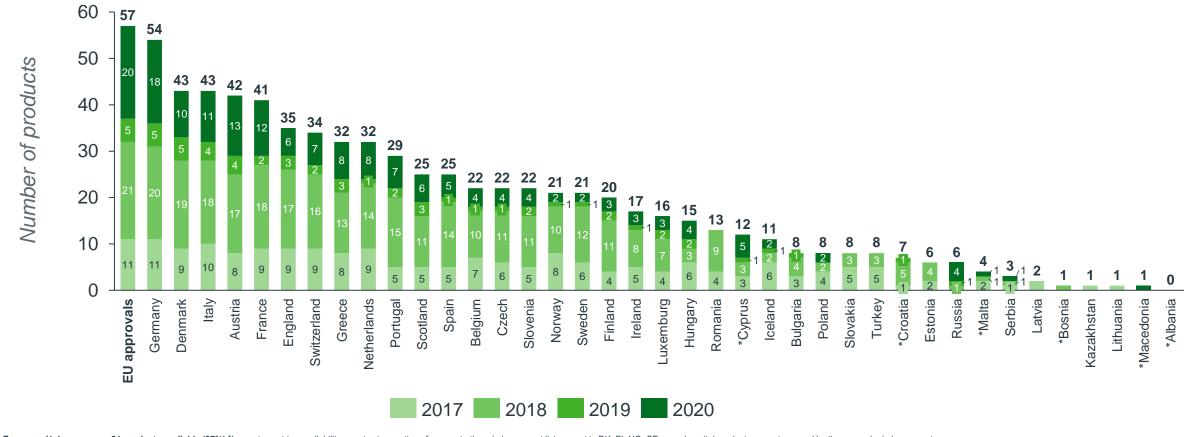

- 3.1. Total availability by approval year
- 3.2. Rate of availability
- 3.3. Rate of full availability\*
- 3.4. Breakdown of availability
- 3.5. Time to availability

<sup>\*</sup> Denotes new indicators published in 2022

### Orphan availability by approval year (2017-2020)

The total availability by approval year is the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>), split by the year the product received marketing authorisation in Europe.

# Orphan rate of availability (2017-2020)

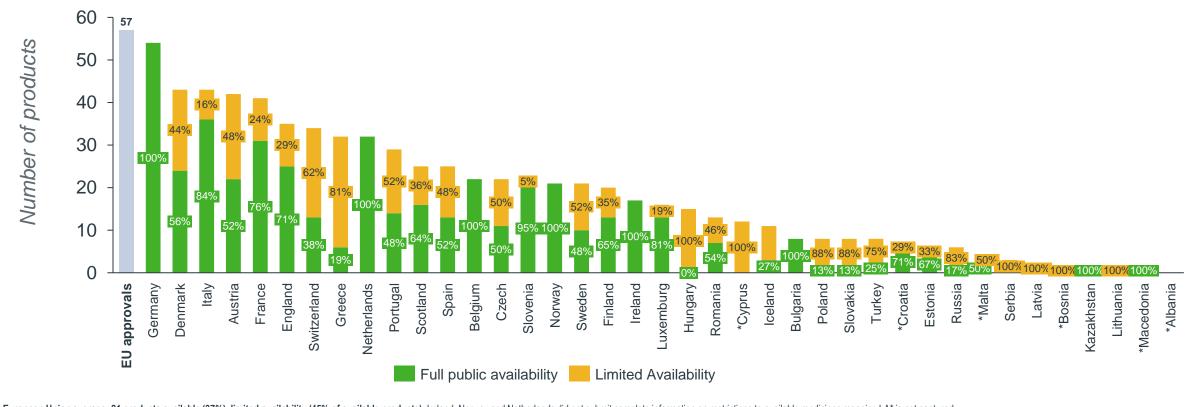

The rate of availability, measured by the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022. For most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>, including products with limited availability.

# Orphan rate of full availability (%, 2017-2020)

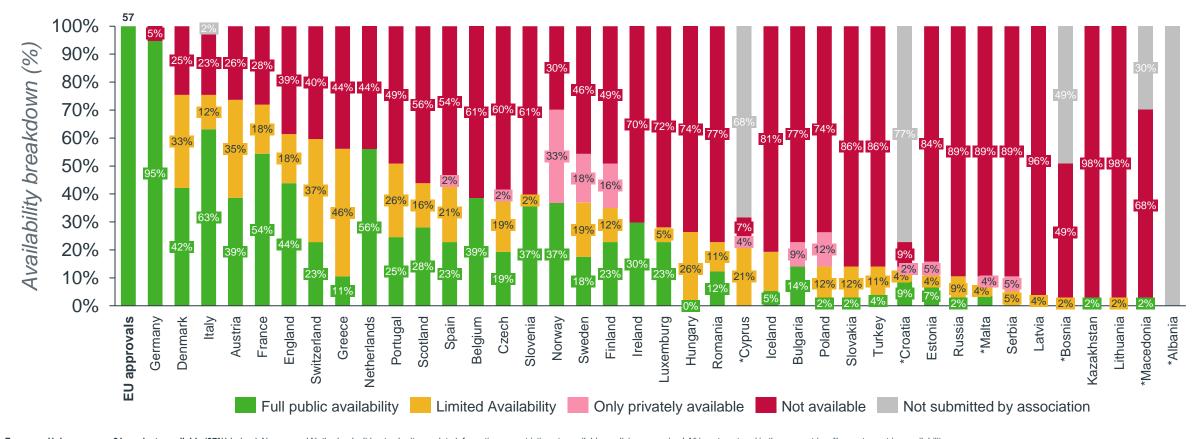

The rate of full availability is a new indicator which shows the proportion of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list†) without any restrictions to the patient population, or through named patient basis schemes which have increased significantly in recent years and were not always captured in survey submissions.

# Orphan rate of availability (%, 2017-2020)

The **breakdown of availability** is the composition of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>). This includes all medicines status to provide a complete picture of the availability of the cohort studied.

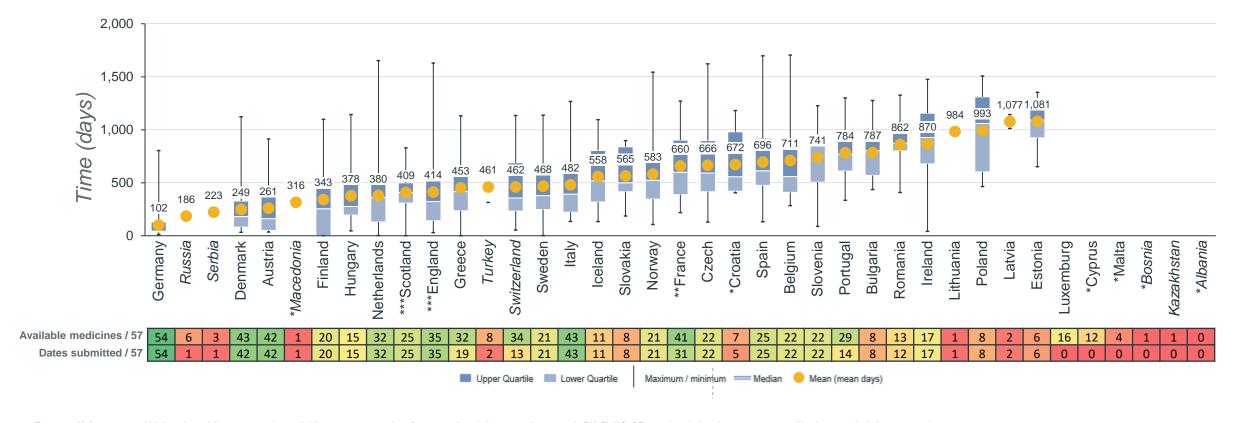

# Orphan time to availability (2017-2020)

The **time to availability** is the days between marketing authorisation and the date of availability to patients in European countries (for most this is the point at which products gain access to the reimbursement list<sup>†</sup>). The marketing authorisation date is the date of central EU authorisation in most countries, except for countries shown in italics where local authorisation dates have been used. Data is correct to 1<sup>st</sup> January 2022.

#### **Key observations**

#### Executive summary

Measure	EU average for all products	Oncology	Orphan	Non-oncologic orphan	Combination therapy
Rate of availability	<b>46%</b> (49% in 2020)	<b>55%</b> (58% in 2020)	37% (41% in 2020)	<b>32%</b> (34% in 2020)	53% (64% in 2020)
Average time to availability	<b>511 Days</b> (504 days in 2020)	545 Days (561 days in 2020)	636 Days (653 days in 2020)	587 Days (667 days in 2020)	407 Days (411 days in 2020)

#### **Summary:**

- EU average availability is 9% lower for orphans than for all products approved and average time to availability is 4 months slower, although improve has occurred this is a non-significant improvement
- The incoming cohort of innovative orphans (centrally approved in 2019) is much larger than previous years
- Many countries have not made orphan medicines available in 2020 or in 2019, making 2-years of delays in some cases.
- The average delay between market authorisation and patient availability for Orphan drugs can be as short as 3.5 months in some countries or as long as 3.6 years although many more still have unknown status and are yet to be available
- In ~80% of the countries, the rate of availability is lower for Orphan drugs compared to all products approved between 2017-20.

#### **Metrics key:**

**Text colour** indicates relative position versus the current (2021) EU average (significantly higher than current EU average / significantly lower than current EU average)

Arrow colour indicates significant changes versus the previous (2020) EU average (significant improvement versus previous year 11 / significant deterioration versus prior year 11

#### Average calculations:

Only a difference of +/- 5% (~30 days) is considered a significant change and therefore highlighted

The EU averages noted throughout are averages for the 27 countries in the European Union for the first time.

# 4. Non-oncology orphan medicines

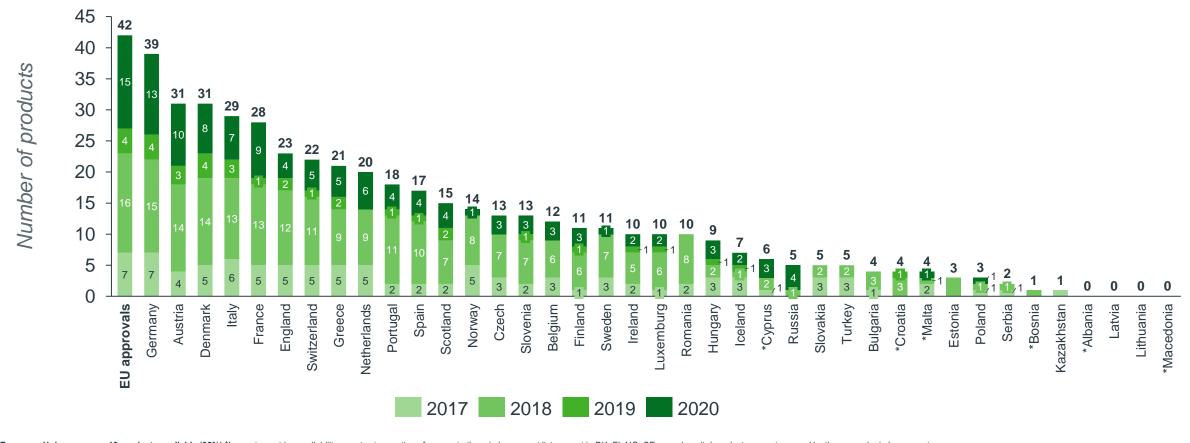

#### **Indicators:**

- 4.1. Total availability by approval year
- 4.2. Rate of availability
- 4.3. Rate of full availability\*
- 4.4. Breakdown of availability
- 4.5. Time to availability

# Non-oncology orphan availability by approval year (2017-2020)

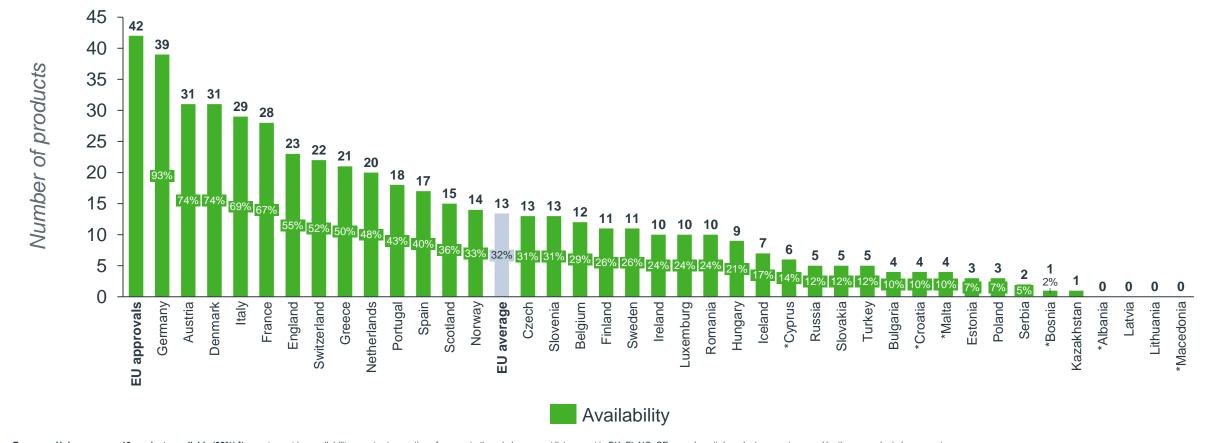

The total availability by approval year is the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>), split by the year the product received marketing authorisation in Europe.

# Non-oncology orphan rate of availability (2017-2020)

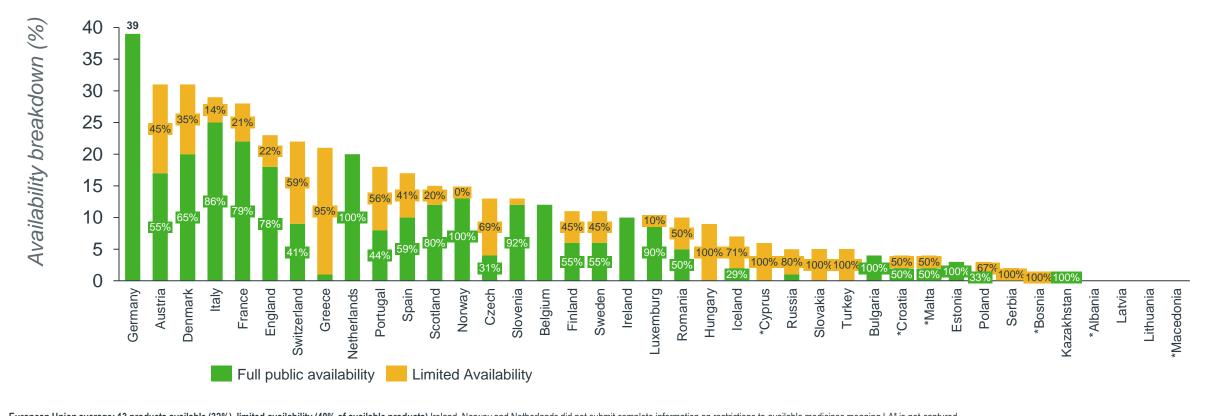

The **rate of availability**, measured by the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022. For most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>, including products with limited availability.

# Non-oncology orphan rate of full availability (%, 2017-2020)

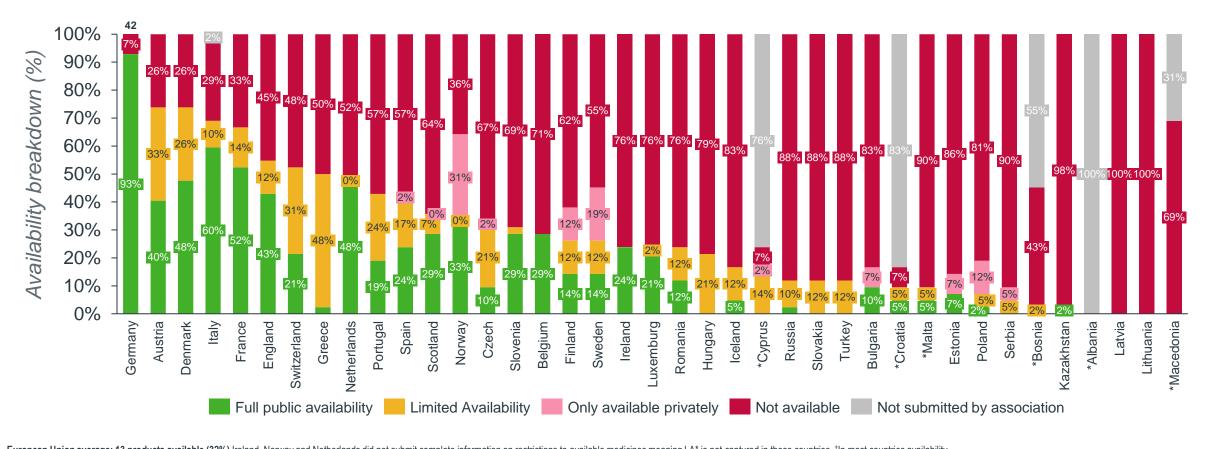

The rate of full availability is a new indicator which shows the proportion of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>) without any restrictions to the patient population, or through named patient basis schemes which have increased significantly in recent years and were not always captured in survey submissions.

# Non-oncology orphan breakdown of availability (%, 2017-2020)

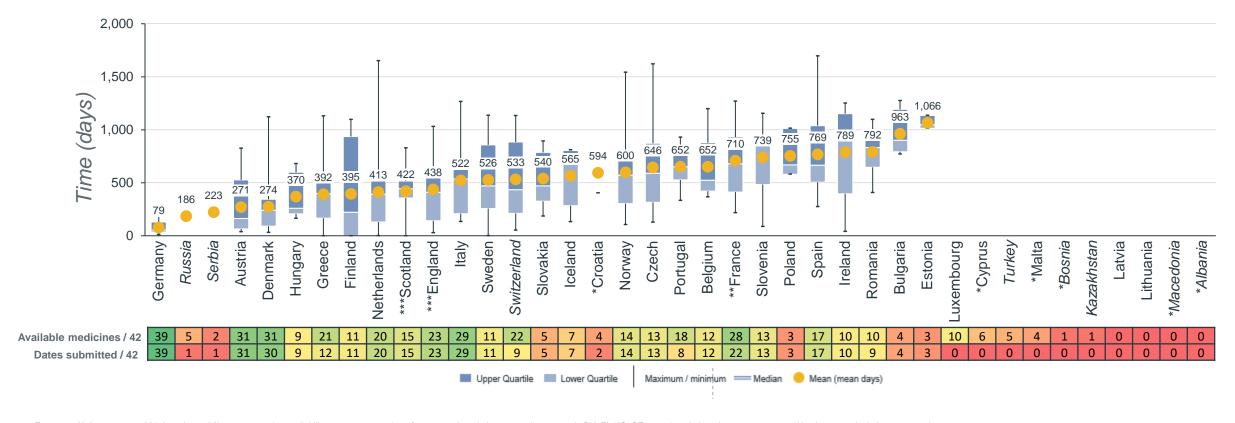

The **breakdown of availability** is the composition of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>). This includes all medicines status to provide a complete picture of the availability of the cohort studied.

### Non-oncology orphan time to availability (2017-2020)

The **time to availability** is the days between marketing authorisation and the date of availability to patients in European countries (for most this is the point at which products gain access to the reimbursement list<sup>†</sup>). The marketing authorisation date is the date of central EU authorisation in most countries, except for countries shown in italics where local authorisation dates have been used. Data is correct to 1<sup>st</sup> January 2022.

**European Union average:** 587 days (mean) †In most countries availability equates to granting of access to the reimbursement list, except in DK, FI, NO, SE some hospital products are not covered by the general reimbursement scheme. \*Countries with asterisks did not complete a full dataset and therefore availability may be unrepresentative, \*\*In France, some innovative products without competitors can be made available prior to market authorisation under the system of Temporary Authorisations. As these are not taken into account in the analysis, the average would be lower. \*\*\*In the UK, MHRA's Early Access to Medicines Scheme provides access prior to marketing authorisation but is not included within this analysis, and would reduce the overall days for a small subset of medicines.

#### **Key observations**

#### Executive summary

Measure	EU average for all products	Oncology	Orphan	Non-oncologic orphan	Combination therapy
Rate of availability	<b>46%</b> (49% in 2020)	<b>55%</b> (58% in 2020)	37% (41% in 2020)	<b>32%</b> (34% in 2020)	53% (64% in 2020)
Average time to availability	<b>511 Days</b> (504 days in 2020)	545 Days (561 days in 2020)	636 Days (653 days in 2020)	587 Days (667 days in 2020)	407 Days (411 days in 2020)

#### **Summary:**

- The non-oncology orphans represent generally poorly understood conditions (e.g. metabolic disorders)
- EU average availability is 14% lower for non-oncology orphans than for all orphan products
- The segment has the slowest average time to availability of the studied segments, but has had a notable improvement versus the previous study and is now faster (for those available products) than the average orphan reimbursement process
- In over 90% of the countries, the rate of availability for non-oncology orphan drugs is lower than for all orphan medicinal products approved
- 25% of countries studies do not have availability to any non-oncology orphan drugs approved in 2020
- 30% of countries studied have availability to less than 10% of the non-oncology orphan drugs approved between 2017 2020

#### **Metrics key:**

**Text colour** indicates relative position versus the current (2021) EU average (significantly higher than current EU average / significantly lower than current EU average)

Arrow colour indicates significant changes versus the previous (2020) EU average (significant improvement versus previous year 11 / significant deterioration versus prior year 11

#### Average calculations:

Only a difference of +/- 5% (~30 days) is considered a significant change and therefore highlighted

The EU averages noted throughout are averages for the 27 countries in the European Union for the first time.

# 5. Combination therapies

#### **Indicators:**

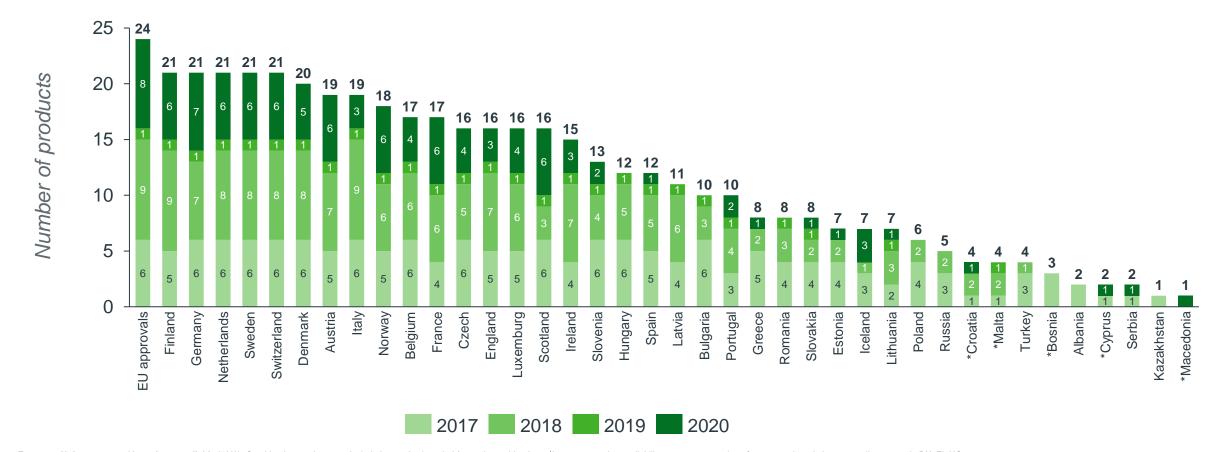

- 5.1. Total availability by approval year
- *5.2.* Rate of availability
- 5.3. Rate of full availability\*
- *5.4.* Breakdown of availability
- 5.5. Time to availability

<sup>\*</sup> Denotes new indicators published in 2022

# Combination therapies availability by approval year (2017-2020)

The total availability by approval year is the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>), split by the year the product received marketing authorisation in Europe.

# Combination therapies rate of availability (2017-2020)

The rate of availability, measured by the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022. For most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>, including products with limited availability.

# Combination therapies rate of full availability (%, 2017-2020)

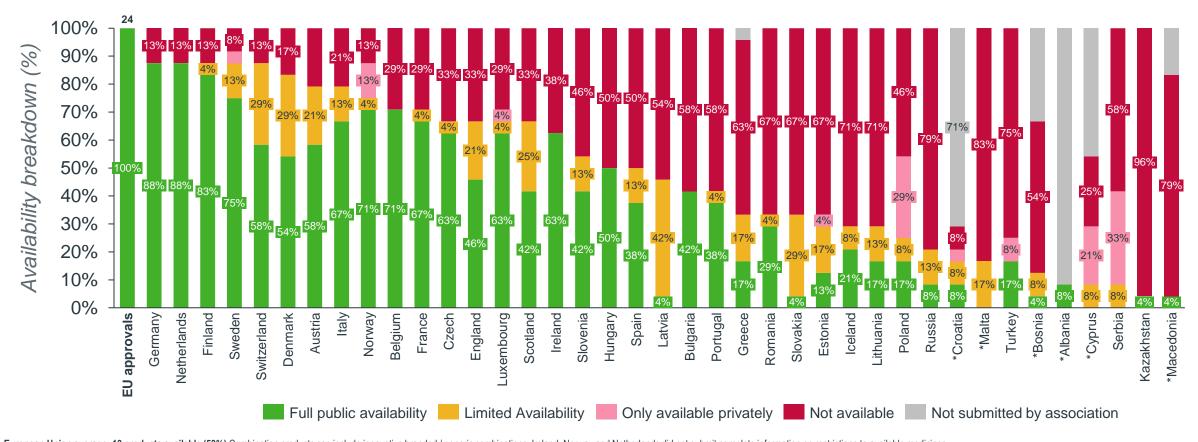

The rate of full availability is a new indicator which shows the proportion of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list†) without any restrictions to the patient population, or through named patient basis schemes which have increased significantly in recent years and were not always captured in survey submissions.

# Combination therapies breakdown of availability (%, 2017-2020)

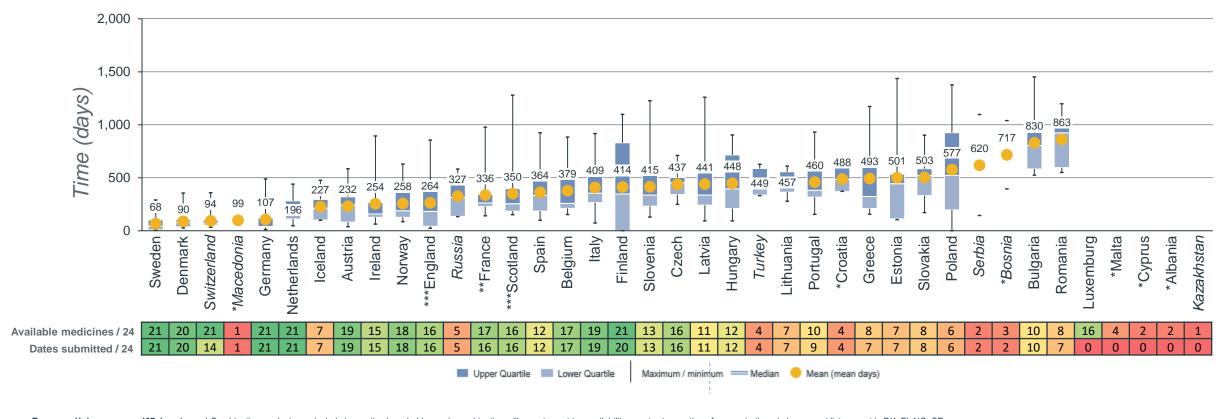

The **breakdown of availability** is the composition of medicines available to patients in European countries as of 1<sup>st</sup> January 2022 (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>). This includes all medicines status to provide a complete picture of the availability of the cohort studied.

# Combination therapies time to availability (2017-2020)

The **time to availability** is the days between marketing authorisation and the date of availability to patients in European countries (for most this is the point at which products gain access to the reimbursement list<sup>†</sup>). The marketing authorisation date is the date of central EU authorisation in most countries, except for countries shown in italics where local authorisation dates have been used. Data is correct to 1<sup>st</sup> January 2022.

European Union average: 407 days (mean) Combination products can include innovative branded / generic combinations; †In most countries availability equates to granting of access to the reimbursement list, except in DK, FI, NO, SE some hospital products are not covered by the general reimbursement scheme. \*Countries with asterisks did not complete a full dataset and therefore availability may be unrepresentative. \*\*In France, some innovative products without competitors can be made available prior to market authorisation under the system of Temporary Authorisations. # **Key observations**

#### Executive summary

Measure	EU average for all products	Oncology	Orphan	Non-oncologic orphan	Combination therapy
Rate of availability	<b>46%</b> (49% in 2020)	<b>55%</b> (58% in 2020)	37% (41% in 2020)	<b>32%</b> (34% in 2020)	53% (64% in 2020)
Average time to availability	<b>511 Days</b> (504 days in 2020)	545 Days (561 days in 2020)	636 Days (653 days in 2020)	587 Days (667 days in 2020)	407 Days (411 days in 2020)

#### Summary:

- EU average availability is 7% higher for combination therapies than for all products.
- Combination therapies have experienced a significant reduction in their rate of availability versus the previous study which can be attributed to the fact that only 1 combination therapy was centrally approved in 2019, versus 8 in 2020
- Combination therapies is the only segment where average time to availability is faster than the average time to availability for all products (3 months faster).
- In over 80% of countries, the rate of availability is higher for combination products compared to all products approved between 2016-2019.
- 85% of the countries have a shorter average delay for combination drugs compared to all products approved 2016-2019.

#### **Metrics key:**

**Text colour** indicates relative position versus the current (2021) EU average (*significantly higher than current EU average* / *significantly lower than current EU average*)

Arrow colour indicates significant changes versus the previous (2020) EU average (significant improvement versus previous year 11 / significant deterioration versus prior year 11

#### Average calculations:

Only a difference of +/- 5% (~30 days) is considered a significant change and therefore highlighted

The EU averages noted throughout are averages for the 27 countries in the European Union for the first time.

# 6. Historic comparisons and extension

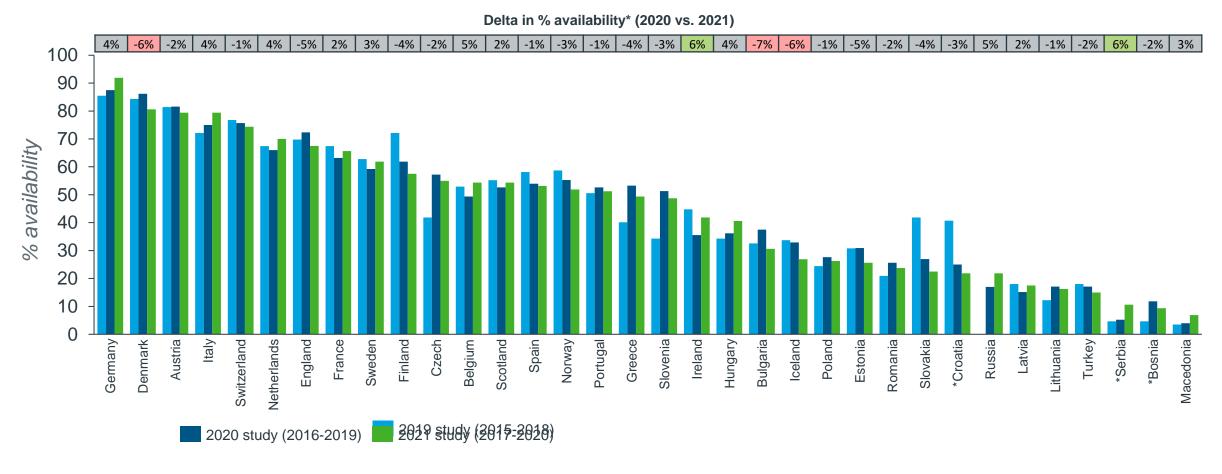

#### **Indicators:**

- 6.1. Comparison of availability versus prior years (2019 2021)
- 6.2 Comparison of time to availability versus prior years (2019 2021)
- 6.3 Extended period total availability by approval year (2014 2020)
- 6.4 Extended period rate of full availability (2014 2020)

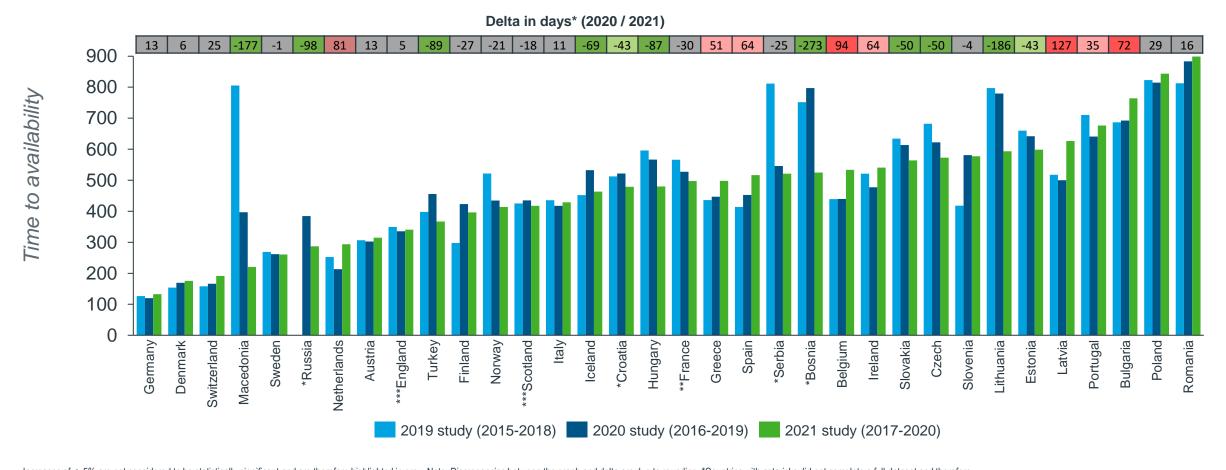

# Comparison of rate of availability

The comparison of rate of availability<sup>†</sup>, measured by the number of medicines available to patients in European countries as of 1<sup>st</sup> January 2022, compared to the rate of availability in previous (comparable) studies. Figures are based on the historic statistics published in the indicators, and major changes are often due to improved reporting.

# Comparison of time to availability

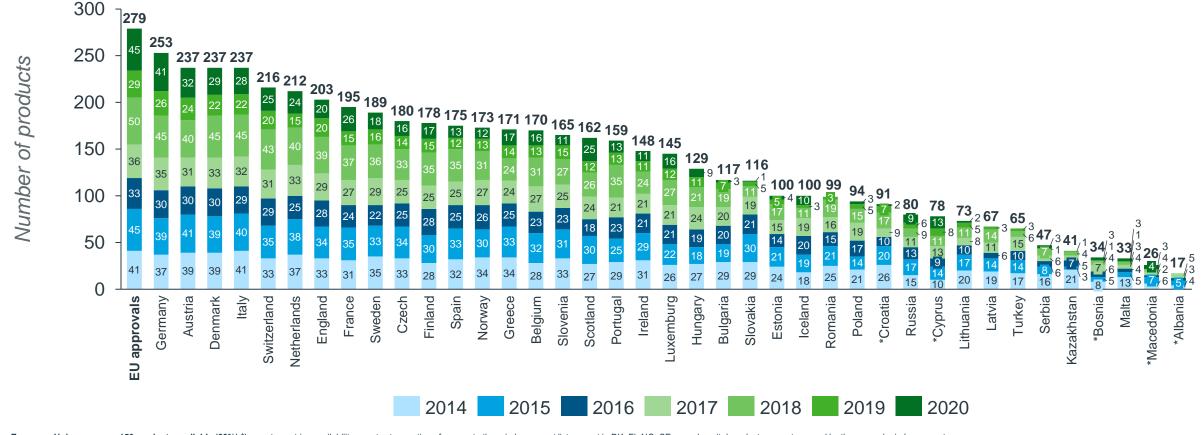

The **comparison of time to availability** (previously know as length of delay) is the days between marketing authorisation and the date of availability to patients compared to previous comparable studies. Figures are based on the historic statistics published in the indicators, and major changes are often due to improved reporting.

# Extended period total availability by approval year (2014-2020)

The extended period total of availability by approval year is the number of medicines available to patients in European countries (for most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>), split by the year the product received marketing authorization. It shows the additional data available within the Patients W.A.I.T. dataset that is not included within the standard 4-year rolling cohort.

# Extended period rate of availability (2014-2020)

The **extended period rate of availability**, measured by the number of medicines available to patients in European countries as of 2020. For most countries this is the point at which the product gains access to the reimbursement list<sup>†</sup>, including products with limited availability. It shows the additional data available within the Patients W.A.I.T. dataset that is not included within the standard 4-year rolling cohort.

#### **EMA list**

- List of all historic Marketing Authorisations for human and veterinary medicines (European Public Assessment Reports) accessed November 2021
- · Human medicines only

#### **Products in scope**

- Products with authorisation year: 2014, 2015, 2016, 2017, 2018, 2019, 2020
- Status: Authorised
- Non-generic; Non-biosimilar; no vaccines
- Include combinations (both products can have already been approved before)
- Remove ATC K, V & T\*

#### Survey cohort (7-years)

- Remove products with an active substance approved pre-2014
- New combination products (those containing already approved active substances are included)
- New formulations were excluded
- New indications of already approved active substances, leading to a separate marketing authorisation only for an orphan drug are included
- For molecules with multiple names from the same company only one molecule is included

#### Report cohort (4-years)

- Medicines in the 4-year rolling cohort 2017 – 2020
- Exclude products that are recently withdrawn prior to analysis (5)

# Country specific definitions of products with availability

Country	Definition of availability
Albania	Accessibility on the public reimbursement list
Austria	A medicine is available if it is included in the reimbursement system (EKO) or available through the Austrian pharmacies list
Belgium	Medicine is available if it is listed on the official website of INAMI-RIZIV as a definitive reimbursement or as a temporary reimbursement (code T) under a Managed Entry Agreement
Bosnia	Accessibility on the public reimbursement list
Bulgaria	Accessibility on the public reimbursement list
Croatia	Accessibility on the public reimbursement list
Cyprus	Accessibility on the public reimbursement list
Czech	Medicine is available if either (1) reimbursed within the SmPC, without any restrictions (e.g. any physician can prescribe)
Denmark	Accessibility on the public reimbursement list
England	Medicines are deemed available if NICE has issued a positive recommendation. For the remaining medicines, IQVIA sales data are analysed to determine if routinely available.
Estonia	A pharmacy product is available if it is reimbursed (pharmacy products) or added to the hospital service list.
Finland	A pharmacy product is available if it is reimbursed (pharmacy products). Hospital products might need an appraisal from COHERE (Council of Choices in Healthcare in Finland) before hospital uptake.
France	Accessibility on the public reimbursement list
Germany	Following marketing authorisation, prescription drugs automatically receive reimbursed status
Greece	Accessibility on the public reimbursement list
Hungary	Medicines are either reimbursed through the indication linked reimbursement system, or available by special finance system (item based) or financed by hospital budget.
Iceland	Accessibility on the public reimbursement list
Ireland	Accessibility on the public reimbursement list
Italy	A product is available if it has received reimbursement status
Kazakhstan	Accessibility on the public reimbursement list
Latvia	Accessibility on the public reimbursement list
Lithuania	Accessibility on the public reimbursement list
Luxembourg	Accessibility on the public reimbursement list
Macedonia	Product is available via specially allocated budget for all eligible patients
Malta	Accessibility on the public reimbursement list
Netherlands	Accessibility on the public reimbursement list
Norway	The medicine has received a positive reimbursement decision by NoMA (out-patient drugs); or the Decision Forum (System of New Methods) has approved reimbursement of a hospital product.
Poland	In most cases a medicine is available if it gains access to the reimbursement list; some medicines are financed via state budget and the date of accessibility would be the date of tender results published by governmental payers.
Portugal	Accessibility on the public reimbursement list
Romania	For 98% of reimbursed medicines, accessibility is considered to be at therapeutic protocol publication (as the HCP cannot prescribe the product until the therapeutic protocols are published). For the remaining 2% of reimbursed medicines that don't need therapeutic protocols, accessibility is after publication in the reimbursement list.
Russia	Inclusion on the Essential Drug List
Scotland	Medicines are deemed available if SMC has issued a positive HTA recommendation. For the remaining medicines, IQVIA sales data are analysed to determine if routinely available.
Serbia	Accessibility on the public reimbursement list
Slovakia	Availability according to the National Health Information Center. For remaining medicines, IQVIA sales data is used.
Slovenia	A medicine is available if it is reimbursed through the regular system, or automatically reimbursed
Spain	Accessibility on the public reimbursement list
Sweden	A medicine is classified as available if it was marketed in Sweden as of December 21st 2021 (listed as supplied in FASS) and: is indicated for a disease included in the communicable disease program, or had received a positive recommendation from the New Therapies (NT) Council (hospital drugs), or has not received an NT-recommendation and is not part of national managed introduction (hospital drugs)
Switzerland	The medicine gained market approval by Swissmedic. Delay calculated using local market authorisation dates.
Turkey	A medicine is available if it gains access to the reimbursement list.

# Country specific definitions of products with limited availability

Country	Definition of limited availability
Albania	Reimbursement is only granted for specific subpopulations of the approved indications.
Austria	Products outside reimbursement system (EKO), but reimbursed on individual pre-approval (No Box)
Bulgaria	No products are reported to have limited availability
Belgium	There are no restrictions on availability
Bosnia	Reimbursement is only granted for specific subpopulations of the approved indications, for individual patients on a named patient basis or there is limited reimbursement while a decision is pending.
Croatia	Products are available for specific patient cohorts (reimbursement guidelines outline specific criteria describing patient eligibility for treatment).
Cyprus	Reimbursement is only granted for individual patients on a named patient basis
Czech	Reimbursement is only granted for individual patients on a named patient basis or there is limited reimbursement while a decision is pending.
Denmark	Products which don't automatically receive public reimbursement, however, the patient can obtain an individual reimbursement if the doctors apply on their behalf.
England	Recommended for a restricted patient cohort relative to licenced indication, either through an optimised NICE decision (including optimised CDF decisions) or an individual funding request.
Estonia	Only reimbursed for restricted patient cohort.
Finland	Reimbursement is only granted for specific subpopulations of the approved indications, for individual patients on a named patient basis or there is limited reimbursement while a decision is pending.
France	Some innovative products without competitors can be made available prior to market authorisation under the Early Access program.
Germany	There are no restrictions on availability meaning drugs are reimbursable in all patient populations.
Greece	Only reimbursed for restricted patient cohorts, or case by case reimbursement if the responsible committee judges its use necessary.
Hungary	Medicine is available through a Name Patient Program (access depends on application for individual use)
Iceland	Products are available to the patients with full reimbursement, but only through individual reimbursement, which can be applied for on individual basis by the patient's doctor.
Ireland	Association was unable to report on limitations to availability
Italy	A product has limited availability if it has not received the reimbursement status (decision is pending) but it is dispensed, generally, via hospital for a specific subpopulation, subject to medical advice
Latvia	Only available through individual reimbursement
Lithuania	Only reimbursed for limited indications (compared to what was approved at market authorisation)
Luxembourg	There are no restrictions on availability
Kazakhstan	Not applicable; no medicines are listed as limited availability.
Macedonia	Product is available via specially allocated budget for limited number of patients
Malta	Limited availability means on a named patient basis or similar or at times approved on a named patient basis for subpopulations.
Netherlands	Only reimbursed under certain therapeutic conditions (annex 2 on the positive reimbursement list).
Norway	Reimbursement is only granted for specific subpopulations of the approved indications. Note: Association was unable to report limitations to availability for the full dataset.
Poland	Only reimbursed for limited indications (compared to what was approved at market authorisation)
Portugal	Product is only available on a patient by patient basis and after an Exceptional Authorisation has been granted
Romania	Reimbursement is only granted for specific subpopulations of the approved indications, for individual patients on a named patient basis or there is limited reimbursement while a decision is pending.
Russia	Medicines included in regional reimbursement channels, and from 2020 drugs available in Krug dobra
Scotland	Recommended for a restricted patient cohort relative to licenced indication by SMC using their HTA process (through submission or resubmission)
Serbia	Products are reimbursed with significant restrictions on the number of patients (e.g. for new generation HepC medicines, there is a cap on only 60 patients per year) or number of indications
Slovakia	Drugs included in the reimbursement list have some limitation (prescription limitation, indication limitation and limitation based on prior insurance company approval), or are reimbursed for individual patients
Slovenia	Only reimbursed for restricted patient cohort
Spain	Only reimbursed for restricted patient cohort
Sweden	Only reimbursed for restricted patient cohort
Switzerland	For products pending reimbursement, patients have restricted reimbursement access. Such restricted access includes 'individual reimbursement' regulated by Art. 71a-d of KVV ordinance.
Turkey	Products only available through a "Named Patient Scheme". These medicines do not require TITCK (Turkish Medical Agency) approval but are reimbursed.
